

ALL ABOUT POLYDIPSIA

In general terms, polydipsia is the word that is used for the person who is dealing with the excessive thirst, which can be caused by the prolonged dryness of the person's mouth.

The [Polydipsia](#) can be caused because of many reasons. Some of them are mentioned below:

1. Diarrhoea
2. Vomiting
3. Excess sweating
4. Major blood loss because of some reason
5. Or because of some of the prescribed medications

However, the polydipsia condition can be considered a little problematic also because the polydipsia condition can actually result in the diabetes, dehydration, or the kidney failure as well.

Basically, in the polydipsia condition a person feels thirsty all the time. In other words, a person's thirst is more potent than usual, which is considered to be continue even after they had a drink or water. In this situation, they can understand that all these symptoms are the likely to be a sign of the polydipsia, which is ideally not well for the human body.

Drinking proper or standard quantity of water is must in the human being's life however drinking excess of it in the excess quantity can be problematic for the person and his body.
