List of Floating Point Types - sandofsky ===== kunley I've never used floating point types. So this article is very interesting for me. Are there any other articles or books that discuss floating point types in detail? ~~~ kzrdude By far the best resource is Walter Bright's (AIX architect, inventor of the C++ standard library, and still one of the best C++ programmers out there) 'Essential Programming Concepts' [ [programming-c-567697...](#)]( [programming-c-567697.aspx](#)) At the time he wrote it, FPU was a fair amount of work to port and a lot of code wasn't written with it in mind. ~~~ WalterBright Hmmm, I just read that book over the weekend, and I have to say, I haven't read anything quite like it since. It's concise, yet comprehensive. I wish I'd had a copy 15 years ago, when I first started writing code. ----- TheLegace My preferred way to deal with floating points is to use the OpenMP clause "omp let" to describe different variables and use it in the code. If you imagine the task(local) workspaces as a matrix and the loops as the rows. You will get the correct order to your variables. This is like row major matrix ordering. If you are unfamiliar with this topic, you can look it up here [ ----- cs702 Interesting info. [
