88 [Gru00] Martin Gruber Understanding SQL 5 9 Ajitsa's Dressing Sense (2005) 2 martin gruber understanding sql pdf 23 [Gru01] Tectonic Shifts in Manufacturing (2001) 1 The six most significant changes martin gruber understanding sql pdf 33 occurred in manufacturing between 1989 and 2005, and are outlined in this article. The first is the decline of manufacturing in the USA. The second is the new trend of outsourcing manufacturing to developing countries. The third is the adoption of lean manufacturing. The fourth is the growth in the size of the Information Technology (IT) industry. The fifth is the realization that a competitive economy depends on developing high-tech products. The sixth is the globalization of manufacturing as a result of the adoption of electronic trading. These trends in manufacturing will influence all companies and will affect all aspects of manufacturing. Therefore, all individuals responsible for manufacturing must be aware of these changes. The one essential characteristic that has remained the same throughout history is the focus on the customer. The customer should be the focus of manufacturing because without customers there would be no need for any product. If people did not want the products that manufacturers made, then they would not buy them. A customer can be a large firm like a department store or it can be a small firm like an individual. The small firm might sell only one product, whereas the department store might sell many different products. The one essential characteristic of customers is that they buy products because they want them. A department store buys products because it needs them. A manufacturer buys products because the customer wants them. A manufacturer that only makes products that it sells to itself will not be successful. In other words, a manufacturing company should find a way to sell its products. Without the capacity to sell, a manufacturing company is nothing more than an armory. The process of selling is critical to a manufacturing company. The company must be able to understand the products that it can manufacture and sell them to people who want them. By understanding the products that it can manufacture, the company knows what it can offer customers and what it cannot offer them. To determine this, it is important for the company to know the products that are currently available. If the company wants to sell a product that is currently not available, it must come up with a plan to manufacture that product. Therefore, the company must know what products 2d92ce491b
