This is a list of notable mediaWiki extensions. Some of these are full-featured plugins and can be used instead of the MediaWiki core extension set.For a full list of all extensions, see the list of extensions on MediaWiki. Status of MediaWiki extensions The MediaWiki.org bug tracker is the single source of truth regarding the status of each of the currently available extensions. There is no formal definition of extension status. The tracker is meant to be used as a communication channel for developers and their users. Status may be listed as "working", "transitional", "suspended", or "buggy". In most cases, "working" means that the extension meets all known functional requirements, "transitional" means that most requirements are met, and "buggy" means that the functionality is known to have problems and is not working well enough for regular use. The status of an extension is only affected by a single developer, and a single developer may not be listening to users. Criteria A few characteristics are used to determine extension status: In order of importance: Is the extension bundled in MediaWiki? Does the extension have an active maintainer? Does the extension meet the MediaWiki project requirements? Does the extension meet the MediaWiki community requirements? A developer working on the extension may, in some cases, have one of the following actions: Listing as "transitional" in the extension's section in MediaWiki.org Listing as "working" in the extension's section in MediaWiki.org Listing as "buggy" in the extension's section in MediaWiki.org Awarding an Extension Award Responding to a request for help from a user in the extension's GitHub issue tracker Giving an "attempted" extension status to the extension's listing in MediaWiki.org, after having done some work on it. A developer who is listed as a "transitional" maintainer may also list their extension as "working" or "buggy" depending on the work they do on the extension. The requirements listed in the "The requirements for extensions" section are subjective and only used to determine whether or not the extension should be added to the project. They may also be followed in order of importance, but there is no explicit requirement to do so. Most extensions start as "suspended" and then later "work". Extensions which were " 2d92ce491b
