Jday-code intal Jun 13, 2014 . A: If you are going to work with big datasets, you might want to check out the Hadoop ecosystem. It gives you the tools you need to work with big data, but this is all fairly complex and it might be overkill. Depending on the amount of data you have, you might find the traditional query performance acceptable. A small example, this may or may not be complete - I haven't tested this. `select string1, string2 from mytable where substring(string2, 1,1) in ('http','ftp','www','ema','ftpf','ftpp');` Lipocalin-2 and IL-6 are potential biomarkers for prostate cancer bone metastasis.

Although bone metastasis is a common complication of advanced prostate cancer (PCa), its pathogenesis and prediction are poorly understood. Here, we present a proteomics-based approach to identify biomarkers of PCa bone metastasis. We compared the expression of proteins secreted by PCa cells and PCa bone metastasis in prostate tissues from 40 castration-resistant prostate cancer patients using 2-dimensional gel electrophoresis coupled with matrix-assisted laser desorption/ionization time-of-flight mass spectrometry. Serum levels of two proteins in bone metastasis-specific protein spots were further measured in 35 patients using ELISA. The two proteins (lipocalin-2 and interleukin-6) were upregulated in PCa bone metastasis, and their concentrations were significantly associated with the stage and metastasis of PCa bone lesions. The two proteins may represent potential biomarkers of PCa bone metastasis and can be used as early markers of this complication of PCa. Celebration in New York Celebrate The 10th Anniversary of the CURE Act The CURE Act, one of the most consequential pieces of legislation in the history of HIV/AIDS, is finally turning 10 years old. "The CURE Act has helped save and transform countless lives and has advanced our understanding of
