View your local and public IP address. No spyware, no adware, no extra services. Just a small program that shows your current IP

address. Visit: If you need a technical and very reliable tool to scan and troubleshoot your wireless network, you should have a look at this free software. It's called WICD. WICD stands for "wireless interface configuration Daemon", and is distributed with Wifi-Radar as a standalone app. In this tutorial, I'll show you how to install and configure the wireless interface configuration Daemon, or WICD, which is a small but very powerful tool that can replace several commercial products that require a

paid subscription. The program is free, doesn't add a new icon to your system tray or tray area menu, and it's completely safe, reliable and quick. What's more, WICD is updated frequently, and new features are added regularly. This means that it's always up to date, and is always ready to serve you.

Moreover, WICD offers great options to help you configure and troubleshoot your wireless network, from connection options and channel settings, to setting the SSID, encryption, DNS, Gateway,

Proxy, VPN, etc. So, let's jump right into the guide and see exactly how you can install, configure and use the free WICD. Installing WICD on Debian WICD is distributed with Wifi-Radar as a standalone app. If you already have Wifi-Radar installed, you can skip this step and start right away. To install WICD, open a terminal and run the following command: `sudo apt install python-wicd python-core` After it's installed, you can launch the WICD application by using the following command: `wicd` If you

don't have Wifi-Radar installed,
run the following command to
install it: `sudo apt install wifi-radar`
If you get a dependency error,
simply run the following command:
`sudo apt install --reinstall python-
wicd python-core` After the
program finishes installing, run it:
`wicd` As usual, you'll be asked for
your password. Now, you're ready
to configure the program and get
connected. How to Connect to

Keymacro is a personal utility for Windows to define your own keyboard shortcut for your favorite Windows action. It's an all-in-one application for key-shortcuts: a single product that combines: Key-slicing: Keep any combination of keys (that are not used to define normal shortcuts) to be used as separate shortcuts (i.e. you can define 3 shortcuts using the combination of "ESC,TAB" and "CTRL+1" and any other action). Combine with predefined

shortcuts: If you use a key combination for your normal shortcut, you can use any of the predefined shortcuts (e.g. print is combined with CTRL+P) Define your own: Every time you define a new shortcut, you can use any key combination you want (even if it's not on your keyboard) Keymacro is a powerful tool for easy shortcuts for your Windows PC. Keymacro does all the common action for you, like for example: To open and close programs To minimize and maximize windows To go to the

next/previous tab in the web browser To go to the next/previous page in the web browser To open the file explorer To go to the beginning/end of the line To open and close the Windows Start menu To open and close the taskbar To open the calculator To start the calculator To open and close the calculator ... and more! Keymacro also includes a powerful feature that allows you to see/assign special key combinations like ENTER, Backspace, CTRL+A, CTRL+C, CTRL+T, CTRL+Z, CTRL+Y,

CTRL+X, CTRL+W, CTRL+I,
CTRL+U, CTRL+F, CTRL+J,
CTRL+K, CTRL+;, CTRL+,
CTRL-N, CTRL-P and CTRL-.

Keymacro can be installed and uninstalled very quickly and does not change any of your keys configuration, the only thing that you have to do is to change the keymacro.exe executable file (you can do this by right-clicking on it and select "Open with"). Keymacro has an easy-to-use interface and provides a full help file. Keymacro allows you to define all the possible

shortcuts (that are already assigned by Windows) to any combination of keys (even if they are not on your keyboard). Keymacro

What's New In IPortView?

IPPortView is a simple, highly intuitive application that shows your IP address. -- IPortView - show your IP address on your desktop and notepad - Most of

these are not required. Description IPortView is a tiny, straightforward and highly intuitive application whose only purpose is to reveal your current local and IP address. It does so by showing a small notification balloon from the system tray area. Otherwise, it sits there silently without distracting you from your regular PC activities. View your local and public IP address The program is not designed to help you change your IP address, so you'll have to resort to another tool for that

purpose, like X-Proxy, Hotspot Shield or CyberGhost VPN.

However, you can run it alongside such an app to easily get a glimpse of your current IP address. Simple setup and systray accessibility

Installing IPortView is a seamless job that shouldn't give you any trouble. It gets sent to the taskbar notifications area as soon as it's launched, and you can left click the icon to find out your local and public IP address. Find open ports and expand shortened URLs By opening the right-click menu you

can copy any of the two addresses to the Clipboard, change the interface language, refresh the addresses, find out if a specific port is open, as well as use a simple tool that expands a short URL, revealing its original form, and allowing you to copy it to the Clipboard. There are no other notable options available here.

Evaluation and conclusion

Unsurprisingly, the application had minimal impact on computer performance in our tests, running on low CPU and memory. It didn't

hang, crash or display error messages. Although it doesn't feature rich options, IPortView is a simple and reliable program that quickly shows your local and public IP addresses from the system tray, backed by a port finder and short URL expander. Plus, it's freeware. # vim:
